

LINTON ZOO

DISTRIBUTION

RED-LORED AMAZON PARROT

Amazona autumnalis

Animals are often named after their appearance. The lore (from the Latin, lorum), is the area between the eye and bill. As you can see, this species has a red lore!

Above: Parrots seized by customs.

Parrots are known for their longevity, the Red-Lored Amazon can live to around 75 years old, so a pet bird really is a lifetime commitment!

Since 2005 there have been over 55,000 individuals confiscated in illegal pet trade.

FACTS & FIGURES

Where found	Central America
Habitat	Humid evergreen to semi-deciduous forests
Diet	Fruits, nuts and seeds
Average length	30-35cm
Average weight	350-450g
Number of eggs	3 or 4
Incubation	26 days

Due to its large range numbers are not considered to be problematic, although everyone agrees that numbers are declining.
